A; Description: attacks cell memolysin A; hemolysin A homology
C; Keywords: calcium binding; cytolysis; exotoxin; hemolysis; lipoprotein; tandem repeat;
E;240-786/Domain: hemolysin A homology <HLYA>
F;240-786/Domain: hemolysin A homology <HLYA>
F;718-809/Region: 9-residue repeats (G-G-X-G-[DN]-D-X-[LVIYF]-X)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A/Status: preliminary

hypothetical protein YPR070w - yeast (Saccharomyces cerevisiae)

Nighternate names: hypothetical protein YP9499.25

Nighternate names: hypothetical protein YP9499.25

C;Species: Saccharomyces cerevisiae

C;Species: Saccharomyces cerevisiae

C;Date: 08-Jul-1995 #sequence_revision 19-Oct-1995 #text_change 09-Jul-2004

C;Date: 08-Jul-1995 #sequence_revision 19-Oct-1995 #text_change 09-Jul-2004

C;Date: 08-Jul-1995 #sequence_revision 19-Oct-1995 #text_change 09-Jul-2004

C;Date: 08-Jul-1995 #sequence number: S54059

A;Accession: S54091

A;Accession: S54091

A;Accession: The sequence of S. cerevisiae cosmid 9513.

A;Bescription: The sequence of S. cerevisiae cosmid 9513.

A;Bescription: The sequence of S. cerevisiae cosmid 9513.

A;Bescription: The S69058

A;Accession: S69058

A;Residues: 1-566 cCOUP.

coding sequence genetically fused to a DNA sequence encoding the protein coding sequence genetically fused to a DNA sequence encoding the protein coding sequence genetically fused to a DNA sequence encoding the protein CC coding sequence state in a bacterial call transformed host call, where the expression cassette expression to the host call. The system is useful for which is exported out of the host call. The system is useful for expression described out of the host call. The system is useful for expression cassette, such that the export protein of interest gual that the export protein of interest is preferably an antigen and this method is useful computation of interest is preferably an antigen and this method is useful computed in sproduced and export protein of interest is preferably an antigen and this method is useful computed in useful for the production of recombinant protein. The system is useful for the production of recombinant protein. Computed an antigenic material against the fusion protein. Computed as a providing an animal antigenic material against which an immune response in a bioreactor, and various devices that facilitate the growth of bacterial against which an immune response in an enimal. The system is also the generation of an immune response in an animal. The system is also the generation of an immune response in an animal. The system is also to useful for preparing immunogenic compositions for vaccinating animals, so the generation of an immune response in an animal. The system is also to host bacterium can also be expressed. A population of recombinant host cells can be transformed with the expression, we ctor, and then the top copulation of bacterial host cells can be maintained in culture and used to produce proteins without having to harvest and lyse the host cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

cassette, where the expression cassette comprises an export protein cassette, where the expression cassette comprises an expression vector having an expression cassette, where the expression cassette comprises an export protein of interest, a host cell transformed host call, where the expression coding sequence encoding the protein of interest, a host cell transformed host call, where the expression cassette expresses the export protein-protein of interest fusion protein cassette expresses the export protein-protein of interest fusion protein of the host call. by providing an expression vector capression cassette, such that the export protein-protein of interest that produced had exported into the culture medium. The export protein of interest is predecad and exported into the culture medium. The export protein may be a member of the HIPS family such as cytolysin A correspond of interest is predecad and exported into the culture medium. The export protein may be a member of the HIPS family such as cytolysin A correspond of interest is predecad and exported into of recombinant proteins (CA). The system is useful for the production of recombinant proteins in the system is useful for the production of recombinant proteins in the system is useful for the production of recombinant proteins a large as a live vector immunogenic composition capable of facilitating mannal antigenic material adainst which an immune response for an animal antigenic material adainst which an immune response to be useful for preparing immunogenic compositions capable of facilitating confocial manual antigenic material adainst which an immune response in an animal. The system is also useful for preparing immunogenic compositions capable of facilitating confocial manual antigenic manual animal animal animal. The system is also to explain of parterial manual animal Novel system for expressing protein of interest, has expression vector with cassette having export protein coding sequence fused to protein coding sequence, host cell transformed with vector, and culturing present invention relates to a system for expressing a protein of 3xample 3; Page 25-28; 33pp; English.

180 300 120 180 AAAGVVAGPFGLIISYSIAAGVVEGKLIPELKNKLKSVQNFFTTLSNTVKQANKDIDAAK 240 The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food 9 DDGITKLNEAQKSLLVSSQSFNNASGKLLALDSQLTNDFSEKSSYFQSQVDKIRKEAYAG LVGDIKTLLMDSQDKYFEATQTVYEWCGVATQLLAAYILLFDEYNEKKASAQKDILIKVL LKLTTEIAAIGBIKTETETTRFYVDYDDLMLSLLKEAAKKMINTCNEYQKRHGKKTLFEV New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder. of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymuclocitide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG303377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             130 AQKSILVSSQSFNNASGKLIALDSQLTNDFSEKSSYFQSQVDKIRKEAYAGAAAGVVAGP 189

The invention relates to novel purified or isolated nucleic acids of essential genes of Aspergillus funidatus. The isolated nucleic acids of the invention are used to treat or prevent infections by a pathogenic conganism such as A. funigatus, to treat a non-infectious disease in a conganism such as A. funigatus, to treat a non-infectious disease in a cubject (e.g. cancer), to prevent or inhibit formation on a surface of a by A. funigatus, or to prevent or inhibit formation on a surface of a biofilm comprising A. funigatus. The polynucleotides are useful for expressing recombinant protein for characterisation, screening or therapeutic use, as markers for host tissues in which the pathogenic corganisms invade or reside, for comparing with the DNA sequence of A. cumigatus to identify duplicated genes or paralogues having the same or funigatus to identify duplicated genes or paralogues having the same or cumiquatus biochemical activity and/or function, for comparing with DNA similar biochemical activity and/or function, for comparing with DNA sequences of other related or distant pathogenic organisms to identify esquences of other related or distant pathogenic organisms to identify and or expression patterns, for raising anti-protein antipodies, as an of expression patterns, for raising anti-protein another immune of expression patterns, for raising anti-protein another immune continement or the polypeptides may be used to raise antibodies or to interaction. The polypeptides may be used to raise antibodies or to elicit immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as a marker for factors. This sequence represents a protein of one of the essential genes correlative receptors or ligands in the case or virulence factors. This sequence represents a protein of one of the essential genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               430

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ି ਨੇ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       essential genes of Aspergillus fundatus. The isolated nucleic acids of the invention are used to treat or prevent infections by a pathogenic organism such as A. fumigatus, to treat a non-infectious disease in a subject (e.g. cancer), to prevent or contain contamination of an object (by A. fumigatus, or to prevent or inhibit formation on a surface of a biofilm comprising A. fumigatus. The polymorleotides are useful for expressing recombinant protein for characterisation, screening or therapeutic use, as markers for host tissues in which the pathogenic organisms invade or reside, for comparing with the DNA sequence of A. fumigatus to identify duplicated genes or paralogues having the same or similar biochemical activity and/or function, for comparing with DNA sequences of other related or distant pathogenic corganisms to identify protein for intensity or function, for comparing with DNA sequences of other related or distant pathogenic organisms to identify potential orthologous essential or virulence genes, for selecting and making oligomers for attachment to a nucleic acid array for examination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   elicit immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fuluds, as a marker for host tissues in which pathogenic organism invade or reside, and to isolate correlative receptors or ligands in the case or virulence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             tors. This sequence represents a protein of one of the essential genes. Aspergillus fumigatus of the invention

The invention also relates to antibodies against the polypeptides, amethod so method so producing the polypeptides, amethod for producing the polypeptides, a method for producing an individual against P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis polypeptide and a method for screening test compounds for anti-bacterial activity. The polypeptides and polymucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial diseases, as components agents for plants. This sequence represents a Proteus mirabilis polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            4 IVADKTVEVVKONALETADGALDLYNKYLDQVIPWQTFDETIKELSRFKQEYSQAASVL--

This sequence represents human transport-associated protein-8 (TRANP-8).

The DNA sequence was first identified in a human colon tissue cDNA concerns the full-length cDNA was derived from a series of overlapping and/or extended cDNA sequences and is a consensus. TRANP-1 to 9 (AAY31639 and/or extended cDNA sequences and is a consensus. TRANP-1 to 9 (AAY31639 and/or extended cDNA sequences and is a consensus. TRANP-1 to 9 (AAY31639 and/or extended cDNA sequences and is a consensus. TRANP-1 to 9 (AAY31639 and/or extended cDNA sequences and is molecular transport. Various disorders are involved in molecular transport. Various disorders are intracellularly or to the extracellular environment. Examples of such disorders include cystic fibrosis, multidrug resistance, concerns and creating forms of dispetes mellitus. Defective conclear transport may play a role in cancer. For example, the BRCA1 conclear transport may play a role in cancer. For example, the BRCA1 concerns of the nuclear win unclear pore complexes, but is aberrantly located in the cytoplasm in breast cancer cells. In other cancers, cells can secrete excessive amounts of darenaline and noradrenal medulla can excessive amounts of darenaline and noradrenaline, leading to secrete excessive amounts of adrenaline and noradrenaline, leading to result from either excessive or insufficient molecular transport disorders can antibodies and nucleic caids encoding TRANP can be used to treat or prevent a cancer associated with increased TRANP antisense concluded in the cancer called with increased TRANP antisense concluded transport of the cargetting mechanism for drugs. Alternatively, a a TRANP antisense concluded transport of the concluded transport of the concluded to treat a disorder caused by reduced transport of the concluded to treat a disorder caused by reduced transport of the concluded to treat a disorder caused by reduced transport of the concluded to treat a disorder caused by reduced transport of the concluded to treat a disorder caused by reduced transpo

This sequence represents human trancytosis-associated protein (TAP). This sequence may be used in the method of the invention for identifying an insulin response medulator. The method comprises contacting a composition comprising insulin-responsive aminopeptidase (TRAP), or its fragment, and TAP, or its fragment, and the test compound and determining the ability of the test compound to medulate binding of TRAP, or its fragment, to TAP, or its fragment. TAP interacts with IRAP in GLTM4 -containing vesicles. Binding of TAP to IRAP is competitively inhibited by a bioactive fragment comprising residues 1-109 of IRAP. TAP is thought to function as a tether which secures GLTM4 vesicles to an internal cellular component. The method of the invention is useful for identifying an insulin response

modulator, especially an IRAP:TAP modulator. The modulator is useful for modulating GLUT4 translocation, enhancing glucose clearance in an insulin resistant subject, and regulating blood glucose levels in a subject. Furthermore, The modulator is useful for treating a subject having an insulin response disorder, e.g. reduced insulin sensitivity or insulin resistance, or diabetes, for treating a subject having prediabetes or its symptoms, e.g. hyperglycemia and/or Type I diabetes
                                                                                                                                                                                                                                                                                                      161

The present invention describes a method (MI) for the staged assembly of a nanostructure using peptide nucleic acids (PNAs). MI comprises: (a) a nanostructure using peptide nucleic acids (PNAs). MI comprises: (a) contacting a nanostructure intermediate (NSI) having at least one unbound contacting a lement (JE) with an assembly unit (AU) that comprises several different JE where: (i) none of these JE can interact with itself or complementary. So that AU becomes non-covalently linked to NSI to produce complementary. So that AU becomes non-covalently linked to NSI to produce complementary JE in AU and a single unbound AU; and (c) a new NSI for us in subsequent cycles; (b) removing unbound AU; and (c) a new NSI for us in subsequent cycles; (b) removing unbound AU; and (c) a new NSI for us in subsequent cycles; (b) removing unbound AU; and (c) is that the complementary JE in at least one cycle are PNAs. Also cyclic respetition of (a) and (b) to form a nanostructure. The new feature of secribed are nanostructures formed from many AU, comprising different JE, where at least one AU includes PNA. MI is useful for producing consistent and inforcements (for aerogels, paper, plastics or cement, structural reinforcements (for aerogels, paper, plastics or cement, particularly as long fibres to improve tensile strength); identification construction of nanowires or nanocircules; size markers caffolds; for construction of nanowires or nanocircules; size markers or controlled; procedure memories; as artificial zeolite for absorbing ions from the transfer nanostructures, so will produce structures with predictable geometry computer memories; as artificial zeolite for absorbing ions and stoichiometry. The present sequence represents a protein containing colled coil dimerisation sequences that can be used for structural containing colled coil dimerisation sequences that can be used for structures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ----AQXDILIKVLDDGITK--LNEAQKSLLVSSQSFNNASGKLLALDSQLTNDFSEK 162
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  695 QOHKDOYNLLKVQLGKDSCHQGPYTDGAQ----MNGVQPEBISR---LREEIEELKSNRE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to immunogenic compositions and vaccines comprising a live attenuated strain of pathogenic gram negative bacteria that secretes an antigen. The vaccine is useful in eliciting a Th2-type immune response in a vertebrate against pathogenis, e.g., helminths, fungi, viruses, protozoans or bacteria. The present sequence is Escherichia coli beta-lactamase signal peptide (bla SS)-Streptococcus pneumoniae pheumococcal surface protein A (PspA)ErSéG80-pspARxI chimeric protein. This sequence is used in the exemplification of the invention. Note: This sequence is stated to be similar to the sequence shown in the sequence listing, however these sequences differ.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     382 RAMVVPEPEQLAETKKKSEEAKQKAPELTKKLEEAKAKL-EAAALEKAASEEMDKAVAA 440
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -----SQLTNDFSEKSSY 165

cubound joining element with an assembly unit comprising at Least one unbound joining element with an assembly unit comprising at least one goining element with an assembly unit comprise to form a nanostructure, for the assembly unit in at least one cycle comprises a peptide nucleic where the assembly unit in at least one cycle comprises a peptide nucleic complementary joining element of the nanostructure intermediate are complementary joining elements, where the assembly unit is non-covalently complementary joining elements, where the assembly unit is non-covalently complementary joining element comprises; (i) capping the nanostructure with ct least one capping unit; and (ii) post-assembly conversion of specific on-covalent intermediate comprises if (i) capping the nanostructure with ct least one capping unit; and (ii) post-assembly conversion of specific non-covalent interactions of complementary joining elements to covalent intermediate comprises are stabilised. The nanostructure comprises as useface bound initiator assembly unit. A first assembly unit used in at least one cycle comprises at least one cycle comprises at least one cycle comprises at least one cycle comprises at least one cycle comprises at least one cycle comprises at least one cycle comprises at least one cycle comprises at least one cycle comprises at least one cycle comprises at least one cycle comprises at least one cycle comprises at least one cycle comprises at least one cycle comprises at least one cycle comprises one cycle comprise comprises of the first structural element to form a stable complex. The assembly unit the further comprising a peptide nucleic acid, or a first structural element comprising a peptide nucleic acid. The assembly unit the further comprising a peptide nucleic acid. The assembly unit the further comprising a peptide nucleic acid. The assembly unit the photonic nanoparticle, inorganic ion, carbon nanotube, lectin or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Staged assembly of a nanostructure containing peptide nucleic acid assembly units comprises contacting a nanostructure intermediate with an assembly unit comprising different joining elements, and removing unbound

chemiluminescent molecule. The assembly unit comprises sub-assembly units that bind to each other to form a complex. The present sequence represents a protein containing a coiled coil dimerisation sequence that can be used as a structural element in the method of the invention.
                                                                                                                                                                                        694
                                                                                                                                                                                                                                                                                                                                                                                               276

frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABB35124 to ABB37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site

```
The sequence is that encoded by a cDNA clone encoding the hyaluronan creeptor (HARC). The sequence was obtd. by screening a 3T3 library in lambda gtl1 with antibodies to HARC. A clone of 1.9 kb was obtained and lambda gtl1 with antibodies to HARC. A clone of 1.9 kb was obtained and lambda gtl1 with antibodies to HARC. A clone of 1.9 kb was obtained and cused to rescreen the library to obtain the full length, 2.9 kb clone. HA is dead to rescreen the library to obtain the full length, 2.9 kb clone. HA is dead to response to growth factors and in chemctaxis by white blood cells. HA may response to growth factors and in chemctaxis by white blood cells. HA may compose to growth factors and in chemctaxis forms of dementia, AlDS, inflammatory disorders, Alzheimer;s and other forms of dementia, AlDS, inflammatory disorders, Alzheimer;s and other forms of dementia, burns, surgical incisions and adhesions, strokes, multiple sclerosis, burns, surgical incisions and adhesions, strokes, multiple sclerosis, convoltang networking network sprouting; also in CNJ and spinal cord regeneration, contraception, in vitro fertilisation and embryo development. See also contraception, in vitro fertilisation and embryo development. See also correct PN field.) (Updated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present invention. Proteins encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and to biosynthesis and biodegradation, especially biosynthesis of Vitemain B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L. monocytogenes and related organisms. Note: The sequence data for this monocytogenes and related organisms. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the preventive and in electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at the printed specification and was obtained in the properties and related organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SGVDTL---AGGINQAYTGSTALSDGLNKMNGS-----VPTLASGITQLNNGQKSLATG 332

ANH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. (I) and have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. or epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts calls which express the colypeptides. The polypeptides (II) via the production of vectors containing the obypeptides may also be used to assay for other inhibitors of their creatment of S. epidermidis infections, e.g. endoarditis AAH53971 to AAH55090 represent oligonucleotide sequences from the present invention. AAH55091 to AAH55091 to AAH55090 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention. N.B. The present invention sequence listing of the present sequences given in the sequence listing of the present specification, however the sequences are given in the disclosure for SEQ ID NO:4465 to even though sequences are given the disclosure for SEQ ID NO:4465 to even though sequences are present in the disclosure for SEQ ID NO:4465 to even though sequences are present for SEQ ID NO:4465 to even though sequences are present colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and the colless are present and th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        89 VATQLLAAYILLFDEYNEKKASAQKDILIKVLDDGITKLNBAQKSLLVSSQSFNNASGKL 148

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to new Proteus mirabilis polypeptides and polymucleotides. The invention also relates to antibodies against the polypeptides, methods for producing the polypeptides, a method of generating vaccines for immunising an individual against P. mirabilis, a generating vaccines for immunising an individual against P. mirabilis polypeptide and a method for screening test compounds for ani-bacterial polypeptide and a method for screening test compounds for ani-bacterial exactivity. The polypeptides and polymucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial diseases, as targets for antibacterial diseases, as targets squence represents a proteus mirabilis polypeptide of the invention.

The nucleic acid is useful for preparing a composition for diagnosing, preventing or treating infection caused by Moraxella catarrhalis. The present sequence represents the amino acid sequence of a M. catarrhalis protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      --YSOA

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), in the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

sources of probes and primers for detecting the genome of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polymorphides (Ab) raised against the polymorphides explored to selection/identification of polymorphides expression of the density that correct are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that carry a gene-containing vector are used to select compounds that can animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. crecombinant production of the proteins, particularly toxins and carried antibacterials useful as insecticides, bactericides and thugh that the proteins, particularly toxins and carried are sensitive to P. luminescens encoded toxins or antibiotics) and as care sensitive to P. luminescens encoded toxins or antibiotics) and as care sensitive to P. luminescens and the proteins are as virulence factors and for identifying targets of human diseases for which P. conditions of the genes and whooping cough). This sequence represents one of the isolated P. luminescens sproteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The invention relates to an isolated nucleic acid comprising any one of the besula antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: cof the nucleic acid inhibits proliferation of a cell. Also included are: coll comprising a promoter operably linked to the nucleic acid; (2) a host cell containing the vector; (3) an isolated conclained by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibiting cellular continuous conclained by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation; (7) identifying a compound that influences the activity of proliferation, or that has an activity against a biological pathway in which a proliferation required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies compound's activity; (11) a culture comprising strains in which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the extent confouct is overexpressed or underexpressed; (12) determining the extent of compound's activity; (11) a culture compound that inhibits the strains; or (13) identifying the target of a compound that inhibits the strains; or (13) identifying the target of a compound that inhibits the compound that inhibits the strains; or (13) identifying the target of a compound that inhibits the compound that inhibits the strains; or (13) identifying the target of a compound that inhibits the compound that inhibits the strains; or (13) identifying the target of a compound that inhibits the compound that inhibits are useful for collieration of an organism. The antisense nucleic acids are useful for the collinar proliferation to the strains; or conditional a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                221 KEMEGSDVIVIVSDI-------DHYTEDNĢRLDERLMHLKSQQAEKEGQQAQINQLLQR 272

Also included are a recombinant vector comprising the nucleic acids is transcription regulatory element, a cell comprising the vector and single-stranded probe comprising the nucleic acid are chosen from 3654 disclosed sequences encoding 3654 disclosed proteins. The nucleic acids is useful for diagnosing pathological conditions resulting from E. faecium bacterial infection (e.g. urinary tract infection) and for screening drugs such as agonists and antagonists. The nucleic acid is useful for recombinant production of Candida albicans infection) and for screening drugs such as agonists and antagonists. The nucleic acid is useful for recombinant production of Candida albicans and vaccines containing the nucleic acid are useful for preventing or treating Enterococcus faecium infections. The present sequence represents

                                                                                                                                                                                         The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an B-value greater by a factor of 3 than the B-value of most similar non-plant sequences are selected. The jobypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid derived from Enterococcus faecium polypeptide having Enterococcus faecium polypeptide having one of 10 fully defined sequences given in the (or comprising 40 equential nucleotides chosen from any of the nucleic acids, its complement or sequences hybridising to it). Also included are a recombinant vector comprising the nucleic acid operably linked to transcription regulatory element, a cell comprising the vector and a single-stranded probe comprising the nucleic acid. The nucleic acids are chosen from 3654 disclosed sequences encoding 3654 disclosed proteins.
